Quick Start Guide

Deye Solution & Synergy

Deye is an approved technology provider for Synergy to operate as a Authorised Agent under the Western Australian Government's Emergency Solar Management program.

deX – Powered by GreenSync – is part of the Deye Systems, providing Synergy with visibility and control of Deye devices via an API integration to SolarMan platform.

To allow Synergy to operate as the Authorised Agent for a Deye system, a number of actions must be undertaken.

1. Ensure that you have completed all items on Synergy's emergency solar management solutions checklist, [found here](#).
2. Installers must ensure that the system is commissioned and online, through Deye System's commissioning processes. More info please visit <https://www.yuque.com/zhangdalu-hkzgd/zr7so9/aaxno0?#>
3. When the system is tested and ready to be switch on, you will be required to register the system with Western Power by submitting an Embedded Generation Application Registration form.
